Mid-Term & Yearly Overhaul Inspections

Your Questions Answered

Q. How Does It Work?

A. You receive a letter from SGS to arrange your test date. You then call SGS to book an appointment. You then call us and we book you in for a pre-test using our Boston computerised test equipment. This takes approximately 2 hours. You then take your cab to our local valet station. Then you present your cab to SGS along with the appropriate paperwork. Sit down and relax for 45 minutes while SGS inspect your cab. Get your PCO plate and get back to work.

Q. What if I get a stop?

A. You bring your cab back to us, we rectify the fault and you take your cab back to SGS for a retest.

Q. What do we do to get your cab passed?

A. We pre-test your cab on our Boston computerised test equipment, which includes a shock absorber and spring test, ball joints, bushes, and track rod ends are also tested. Brakes are tested and adjusted along with the headlights and other auxiliary equipment. Finally we give the vehicle a smoke test to make sure the cab complies with the emissions criteria.

Q. What will it cost?

£99
